RAISING THE BAR ON HOCKEY5s DEVELOPMENT

FIKAGEAR Hockey5s boarding was the first boarding to be approved by the International Hockey Federation (FIH) for this new sport.

Three different types

FIKAGEAR has developed three different types of Hockey5s boarding to facilitate the growth of this sports at any site or club. We offer a permanent as well as a temporary boarding.

Easy to install

These boardings are made of lightweight materials, making them easy to place or remove. A special trolley is available to bring the boarding out to the field.

Commercial opportunities

The boarding can be branded, is easy to clean and can be recycled.

Hockey5s

Hockey5s is a fast and highly skilful short format of hockey. It is adaptable to multiple surfaces, environments and spaces. The game is played between two teams with four field players and a goalkeeper.

FIKAGEAR Hockey5s boarding complements the RSI SPORTS portfolio for hockey. With RSI SPORTS Turf panels and artificial turf surfaces, RSI SPORTS offers all components to install a (small-sided) hockey surface.

FOCUS ON HOCKEY

FIH approval

Partner up.

FIKAGEAR Hockey5s boarding is just one of the items that RSI SPORTS makes available to EuroHockey. As partner of EuroHockey, RSI SPORTS sees it that European elite hockey players always have the best hockey infrastructure available for an EuroHockey tournament.

At the same time, feedback received from the players, is used to develop new products.

FIKAGEAR

Purpose: G25 H5s boarding Mobile and semi permanent use FIH approved Class 1 & 2
Size: 2000 X 200 X 250 mm (l x w x h)

Connection: Fixed with ECS (Easy Connect System);
 installation of a pitch in few minutes

Weight: 7 kg per board /3,5 kg per m¹

Packaging: 120 m¹ - 1 pitch is packed on 1 pallet (2000x1000)
 (total weight 420 kg per pallet)

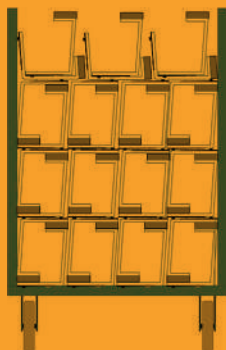

Material: Reinforced plastic + Foam pad

Warranty on construction: 2 years

Optional: Transport car: (2 per field needed)

Sponsoring: Possible by printing and stickers

Purposes: T25 H5S BOARDING; Permanent use FIH approved Class 1
Size: 1000 X 225 X 250 mm (25 mm foam protection on top)

Connection: Loose stand or fixed. Steel fixation with connection plates to create a very solid boarding construction.

Weight: 15 kg per board

Packaging: 120 m¹ - 1 pitch is packed on 6 pallets (1200x800)
(total weight 350 kg per pallet)

Material: Galvanized steel frame with recycled ECO Plastic and Foam pad

Warranty on construction: 8 years on steel frame and Eco Plastic boarding
Excluding Foam pad (2 years) replaceable on site.

Sponsoring: Possible by printing and stickers

Purpose: U22 H5s boarding Mobile and semi permanent use – non FIH Approved

Size: 2000 X 200 X 225 mm (l x w x h)

Connection: Fixed with ECS (Easy Connect System);
installation of a pitch in few minutes

Weight: 6,5 kg per board /3,25 kg per m¹

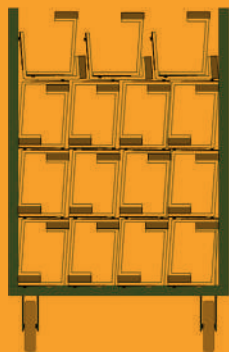

Packaging: 120 m¹ - 1 pitch is packed on 1 pallets (2000x1000)
(total weight 390 kg per pallet)

Material: Reinforced plastic

Warranty on construction: 2 years

Optional: Transport car: (2 per field needed)

Sponsoring: Possible by printing and stickers

TRANSPORT & STORAGE

A H5s set (G25-U22) requires approximately one hour of assembly time with 2-3 people and can then be set up in about 15 minutes with around 3-4 people. It is comparable to an indoor setup but with one extra length.

The G25-U22 boards are approximately 2.30m long and can be transported on a custom-made trolley. The boards fit together (four at a time), so two trolleys are sufficient. The trolleys are 1 meter wide and approximately 1.5 meters high. They can be stored along the field, preferably covered with a tarp, or placed in a shed/container for better security.

Additionally, FIKAGEAR is developing an innovative storage solution with a specially designed tarp structure that allows the trolleys to be stored safely outdoors. This cover provides protection against all weather conditions, ensuring optimal material preservation and saving indoor storage space.

The tarp structure is custom-made and tailored to the specific requirements of the user. Are you interested in this solution? Please contact us for more information on the available options.

Do you have other specific storage needs? We are happy to think along with you and offer solutions that match your requirements and circumstances.

PRICING & FINANCING

Rabobank subsidiary 'De Lage Landen (DLL)' has agreed to offer the possibility of leasing the boards in the Netherlands for a period of 2 or 3 years. This allows clubs to spread out the investment costs. DLL is a global company so this could open up a conversation with local hockey federations to facilitate H5s in a "bulk scheme" for their clubs.

In the development of H5s, we see clubs and federations creating their own business cases. For example, HC Etten-Leur has set up an H5s club competition during the winter alongside their indoor hockey offerings. Members pay an additional membership fee for this, allowing the club to recover a significant portion of their investment.

HC Union financed their purchase through local subsidies, while other clubs have successfully incorporated these field systems as an integral part of their artificial turf field renovations and having local governments pay for the boards as necessary equipment.

For current prices of the various FIH approved H5s sets, trolleys, please visit www.fikagear.com

IT IS ALL ABOUT THE CONCEPT

The FIKAGEAR 5s PITCH concept consists

- 1050 sqm of hockey turf + glue and tape
- 1050 sqm of Turf panels and impermeable geotextile which is the base construction
 - (Locally a flat surface and 1 perimeter drain is enough)
- 1 FIH approved hockey5 boarding set
- 2 FIH approved goals
- 2 mobile fences behind the goals
- 1 40ft container

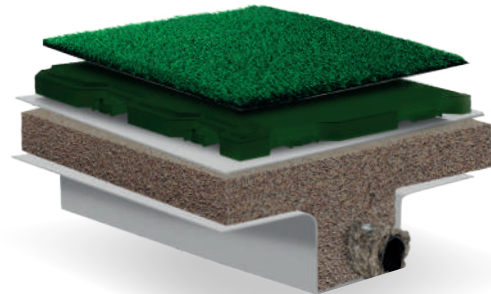

**INNOVATIVE
MODULAR
SOLUTIONS
KEY FOR SUCCES**

H5s Pitch

Introduce a full pitch H5s concept based on:

- Sanddressed artificial turf in PET (fully recyclable) or PE;
- Base panel (fully recyclable);
- FIH approved FIKAGEAR H5s boarding (fully recyclable);
- H5s goals.

GET YOUR FUNDAMENTALS RIGHT

Always a playable surface

The drain slots in the panel facilitate a horizontal or vertical waterflow that exceeds the drainage capacity prescribed by FIH. Water can either be guided to the subbase or, when installed on an impermeable layer, to the side of the artificial turf surface.

Comfortable surface

The engineered design provides the panels with shock absorbing and impact attenuation characteristics. Tension exercised on the Turf panels is directed horizontally, which significantly reduces the jarring of the joints.

Safe surface

The Easylock panels in combination with a sand dressed or sand filled turf can make the international FIH category. In combination with a shockpad both the global and elite standards can be achieved. The "dry" water pitch for hockey5s is an ideal product with the Easylock panels to make sure the game is played how it should be.

Easy to install

The installation of Easylock panels doesn't require special tools or skills and does away with the need for groundworks or excavation. The panels measure 75x55x2,2 cm. This makes them the solution of choice for hockey projects in difficult to access areas.

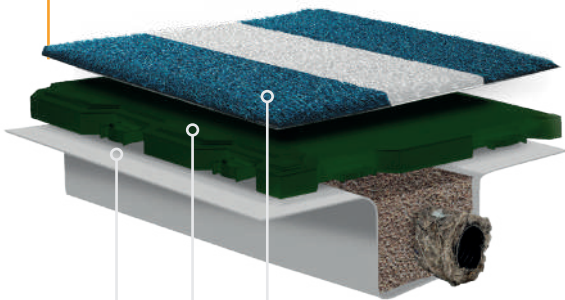

Facilitating reuse of water

When connected to a water storage solution, Easylock panels facilitate the reuse of water on the pitch.
